

GUARDIAN

7,000 / 10,000 / 13,000 WATT MODELS

GUARDIAN air-cooled standby generators are designed to supply electricity to pre-selected circuits in the event of a utility power outage. The pre-wired, pre-packaged system makes installation easy and affordable. That's why GUARDIAN is the *#1 Selling Home Standby Generator on the Market*. Models run on natural gas or liquid propane gas.

- **Breakthrough Design:** Creates the greatest starting power to run the items that matter most (13kW model starts a 4-ton A/C and the 10kW starts a 3-ton unit)
- **Generac OHVI® Industrial Engine:** The longest life design and most horsepower in its class
- **Electronic Governor:** Maintains steady speed and eliminates voltage drop when loads are applied (10kW and 13kW models)
- **Circuit Coverage:** Protects 12, 10 or 8 circuits of your home (13, 10 and 7kW models respectively)
- **Superior Paint:** Tough paint finish for unmatched durability
- **Easy Installation:** complete pre-packaged, pre-wired system

WATTS / CIRCUITS	MODEL
7,000 / 8 Circuits	.5240
10,000 / 10 Circuits	.5244
13,000 / 12 Circuits	.5242
Without Transfer Switch	
7,000	.5280
10,000	.5281
13,000	.5282

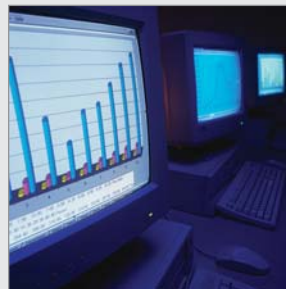

FEATURES

4-Ton A/C start-up power: Protects up to a 4-ton air conditioner along with other selected circuits in a power outage. This eliminates the need for expensive, load management systems often found with competitors' models.

Engine horsepower strength: Generac OHVI® (Overhead Valve Industrial) engines are specifically designed for generator demands. The full pressure lubrication system and spin-on oil filter contribute to the longest running engine in the industry. Advanced alternator design provide the greatest motor starting capability

Safe electrical output: Air-cooled models 10 & 13kW feature an electronic governor, which maintains steady speed and eliminates voltage drop when loads are applied. This provides a smooth rate of electricity, which is especially important with sensitive electronic devices (computers, dvd players, etc.)

Pre-packaged system includes:

- Automatic transfer switch load center
- 30 ft., 5 ft. & 2 ft. pre-wired conduits
- Outdoor connection box
- 1 ft. flexible fuel line
- Composite mounting pad
